

### **ABSTRACT OF THE INVENTION**

A trunk space storage system comprising at least one cross car bar, at least one recess, and at least one storage container. This trunk space storage system further comprises one front right recess, one left front recess, one right back recess, and one left back recess are located on the side walls of the motor vehicle. The front cross car bar fits between front right recess and front left recess. The back cross car bar fits between back right recess and back left recess. The storage container fits between front cross car bar and back cross car bar to create the trunk space storage system. This trunk space storage system is an improved and easy to use system for those who have difficulty accessing trunk space or for those who want to prevent spills of damage to objects held in trunk space.
